

CLAIMS:

1. (CANCELED)

2. (CURRENTLY AMENDED) A method of transforming a hand-held umbrella into the free standing umbrella or tent, comprising:

(a) an umbrella's handle lever made from two parts joined one other where the upper part always supports the umbrella skeleton in its unfolded position and a handle part turns from a fixed vertical to a fixed horizontal position,

(b) a handle part telescopically sliding up through the upper part,

(c) a handle part completely detaches from the upper part of the handle lever,

3. (CURRENTLY AMENDED) Tent structure to hand-held umbrella comprising:

(a) a hand-held umbrella structure in claim 2,

(b) any amount of telescopic folding hard poles of equal length joined to the ends of the umbrella skeleton arms in a detachable or permanent manner,

(c) any design of soft pulls to form wall sides to support the umbrella-tent skeleton comprising of fabric or other material,

(d) the soft walls may include pockets to be filled up with solids or liquids to ensure further stability of the umbrella-tent structure,

4. (CANCELED)
